Subject: What's in your food?

Dear Corporate and Government Leaders,

Genetically engineered food ingredients or crops should not be allowed on the market until:

- 1) Independent safety testing demonstrates they have no harmful effects on human health or the environment,
- 2) They are labeled to ensure the consumer's right-to-know, and
- 3) The biotechnology corporations that manufacture them are held responsible for any harm.

There is much ado being made about the right to privacy these days. However, American Corporations are taking away that right by denying us the right to know what is in our food. My privacy is violated when someone provides me with food that has been tampered with and the tamperers won't let me know what they have done.

Sincerely

Gaylord Yost
